

C-97 → Passing string as an argument to a function

Example ①

```
void display (char []);
```

```
void main()
```

```
{
```

```
    char str[] = "Jenny";
```

```
    display (str);
```

```
}
```

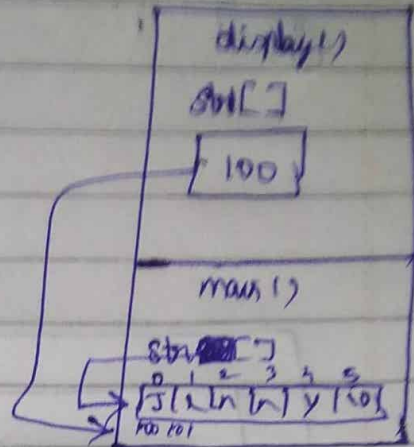

```
void display (char str[])
```

```
{
```

```
    printf ("string is %s", str);
```

```
}
```

O/P → Jenny.

Example ②

```
void modify (char [], char []);
```

```
void main()
```

```
{
```

```
    char str1[] = "Jenny";
```

```
    char str2[] = "Abhatri";
```

```
    modify(str1, str2);
```

```
}
```

```
void display (char str1[], char str2[])
```

```
{
```

```
    int i, length = 0;
```

```
    for (i = 0; str1[i] != '\0'; i++)
```

```
    {
```

```
        length = length + str1[i];
```

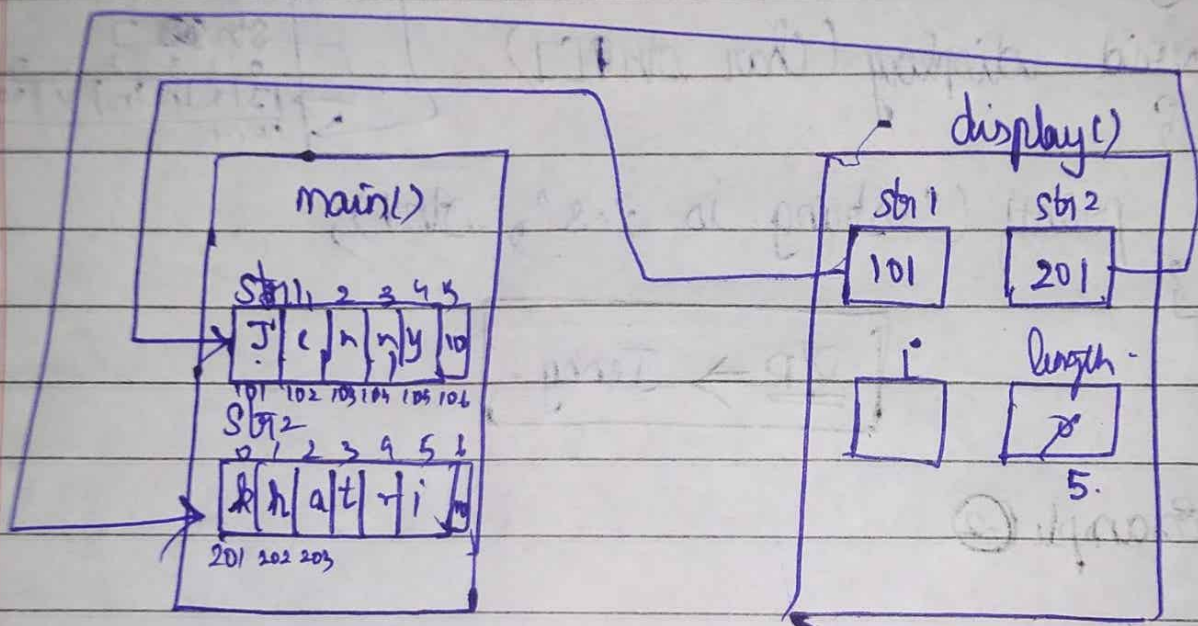

```
    }
```

```
printf("length of string is %d", length);
```

```
str2[1] = 'K';
```

```
printf("string 2 (str2) is %s", str2);
```

```
printf("%s %s", str1, str2);
```

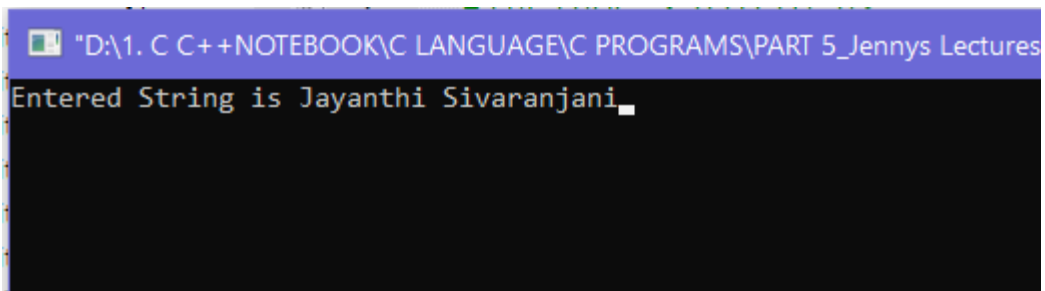

O/P ⇒ Length of string is 5
string2 (str2) is kkatru
Jenny kkatru

```

1  #include <stdio.h>
2  #include <stdlib.h>
3  /** 1 - PASSING STRING AS AN ARGUMENT TO FUNCTION **/
4  /** Display function call **/
5  void display(char[]);
6
7  int main()
8  {
9      char str[]="Jayanthi Sivaranjani";
10     display(str);
11     getch();
12 }
13 void display(char str1[])
14 {
15     printf("Entered String is %s",str1);
16 }
