

C-124  $\Rightarrow$   $r^+$  mode in File Handling

\* " $r^+$ " mode is we just read the file; if file don't exist then it will not create the file simply it will exit from the program.

$r^+$  mode:-

\*  $r^+$  mode is both for reading and writing; and if the file don't exist it will not create the file; but main purpose is to read.

```
FILE *fp = NULL;
```

```
fp = fopen("abc.txt", "r+");
```

```
if (fp == NULL)
```

```
{  
    printf("Error/ file do not exist");  
    exit(1);  
}
```

3.

// To read we use fgets (or) fgetc  
fgets(str, 50, fp);

// To write in a file using  $r^+$  mode we can only modify that file, but not appending into that file.

Date: \_\_\_\_\_  
Page: \_\_\_\_\_

\* Example, Consider we have a file "abc.txt" with some contents and we are using `r+` mode in it used to do both read & write,

\* But write mode will start to write in the file from the point where the file pointer exist.

abc.txt

Hi, this is awesome.

`fputc("Z", fp);` ⇒ 

Zi, this is awesome

`fputs("Jenny", fp);` ⇒ 

ZJenny is awesome.

\* We can also modify the content at last or at any point we want but we should write a separate logic and this will be discussed in future lessons.

\* But by default `r+` mode will modify the file from where the file pointer exists.

NOTE:

always don't forget to close the file pointer with `fclose(fp);`

```
1  #include <stdio.h>
2  #include <stdlib.h>
3  /** 20-File Handling (r+ mode) **/
4  /** It do both read/write but special purpose is to read **/
5  /** It wont create a file, if file exist it will read or write **/
6
7      /** Only Read mode **/
8  int main()
9  {
10     FILE *fp=NULL;
11     fp=fopen("abc.txt", "r+");
12     if (fp==NULL)
13     {
14         printf("Error/File do not exist...");
15         exit(1);
16     }
17     char str[50];
18     while (!feof(fp))
19     {
20         fgets(str, 45, fp);
21         printf("%s", str);
22     }
23     fclose(fp);
24     return 0;
```

```

1  #include <stdio.h>
2  #include <stdlib.h>
3  /** 20-File Handling (r+ mode) */
4  /** It do both read/write but special purpose is to read */
5  /** It wont create a file, if file exist it will read or write */
6
7      /** Only Read mode */
8  int main()
9  {
